

“Flexicon” Compressor Control Products.

FL2Lite Entry level 2 machine duty selection unit.

Simple, Cost effective control of Lead/Lag systems.

Introduced in response to requests for a simple, cost effective Lead/Lag control, offering benefits over and above two pressure switches in a box, the FL2Lite is set to become the benchmark for performance and value in the industry.

Microprocessor driven, and utilising a single pressure transducer (supplied on 5 metres of cable) which can be mounted anywhere in the air system, this unit offers greater accuracy of control, removes the need to run a pressure line to the box, and has the additional benefit of four modes of operation, including automatic changeover.

The FL2Lite is available through a selected network of distributors, and as branded product through original equipment manufacturers (OEM's).

Full technical backup is available to assist with any specific machine requirements, on request.

Features.

- Volt - free outputs, allow connection to any make of compressor, irrespective of control voltage.
- Indication of Power, Lead machine, Auto C/Omode, Running.
- Choice of operating modes:
 - Comp No1 Lead.
 - Comp No2 Lead.
 - Automatic changeover.
 - Local.
- Remote Control Input. (BMS, Switch, Timeclock)
- 0 - 15 bar range.
- Simple installation.
- Supplied with full installation and operating instructions.
- Superb value for money.
- Special requirements easily implemented.
